LETHAL AUTONOMOUS WEAPONS AND FUTURE WARFARE

LECTURE 2021

OUR SPECIAL
GUEST

Amy L. Fletcher, PhD

Lethal autonomous weapons (LAWs) are disrupting warfare in a complex era characterized by an unsure America, an assertive China, a rising India, and an unpredictable Russia. Thirty countries have called for a global ban on LAWs, citing both the humanitarian consequences of 'robot warfare' and the need to have a human 'in the loop' of any decision to use lethal force. However, the four countries noted above see autonomous weapons as crucial to geopolitical power in the 21st century. This presentation introduces the global debate on LAWS and considers the future of 21st century warfare.

2 November
Starting @ 3:30

Location:

**O'DONNELL
AUDITORIUM**

**This work is supported by a Marsden Foundation grant (Marsden Grant 19-UOC068} from the Royal Society of New Zealand. Thanks ore due to Dr. GeoffFord, postdoctoral scholar, for his assistance in building the dataset for this analysis*
